

Model Context Protocol

Presentation by : Ashwin Baral

Introduction

- 01** It sets rules for how AI models talk to tools and servers
- 02** Officially introduced by Anthropic in late 2024
- 03** By 2025, It became widely adopted and open for the community

The diagram features three stacked teal boxes on the right side, each containing a title and a description. On the left, a vertical line with several circles (some solid, some hollow) has three horizontal lines extending to the left of each box. From these points, lines branch out to the right, connecting to the boxes and extending further to the right edge of the image. The overall style is clean and modern, using a teal and light green color palette.

LLM

Large Language Model

AI Agents

Call external tools to do the task

MCP Architecture

Expose tools and logic via MCP

LLM

Chat

Application

Enables real-time digital conversation with instant sending and receiving of text messages

Request

GPT

LLM

Advanced AI system trained on vast amount of text data to generate human-like language.

Response

AI Agent

pre-built AI Agents

The Integration Problem

01 Different APIs for every service

Uber Eats: `/cart/add`
expects `product_id`,
`quantity`

Domino's: `/orders/new` →
expects `item`, `size`

02 Different Endpoints and data formats

Uber Eats may return `id` and
`photos` array

Domino's may return
`product_id` and `image_url`

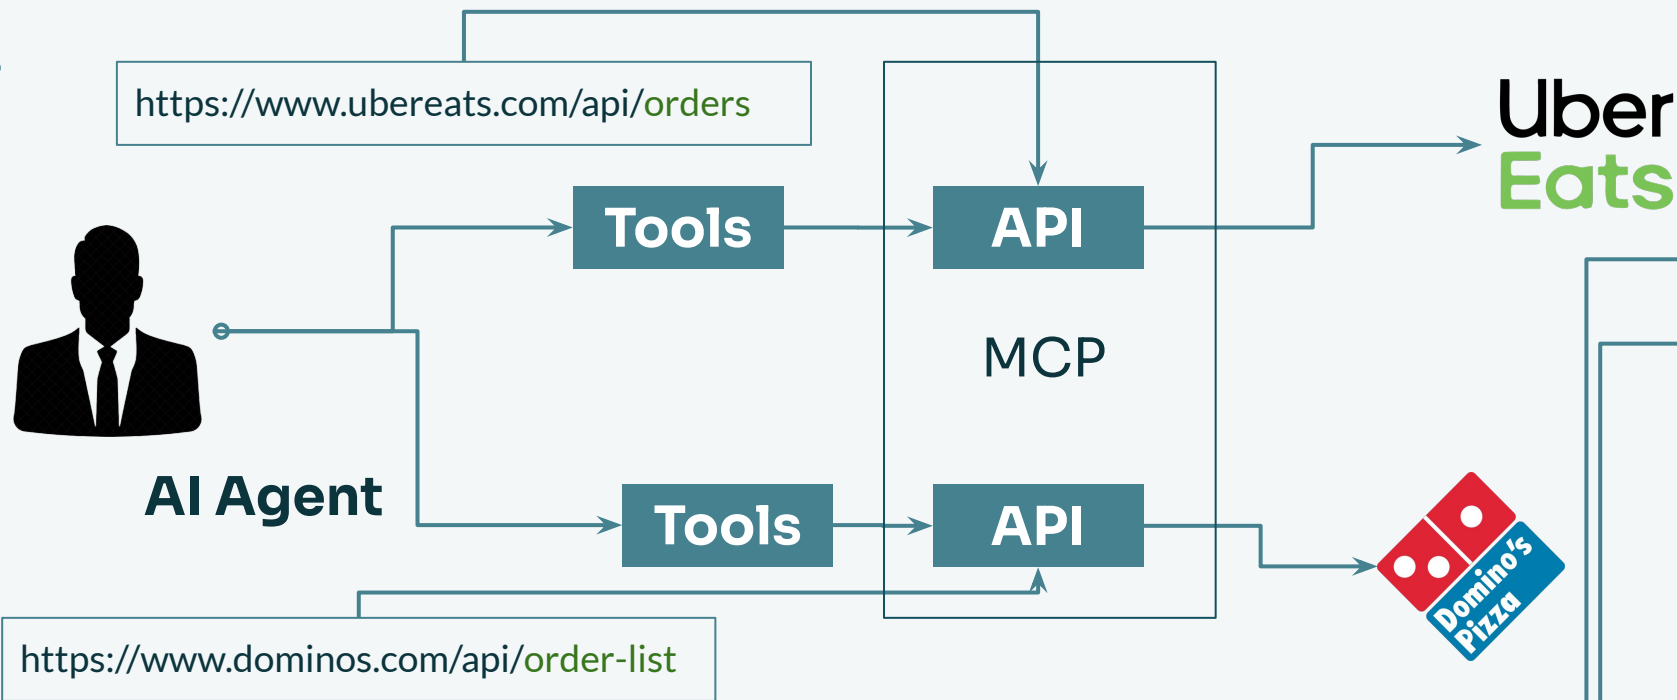

03 Developer need to custom code

Write separate code
for each platform

Handle errors
differently for each
service

MCP enters the game

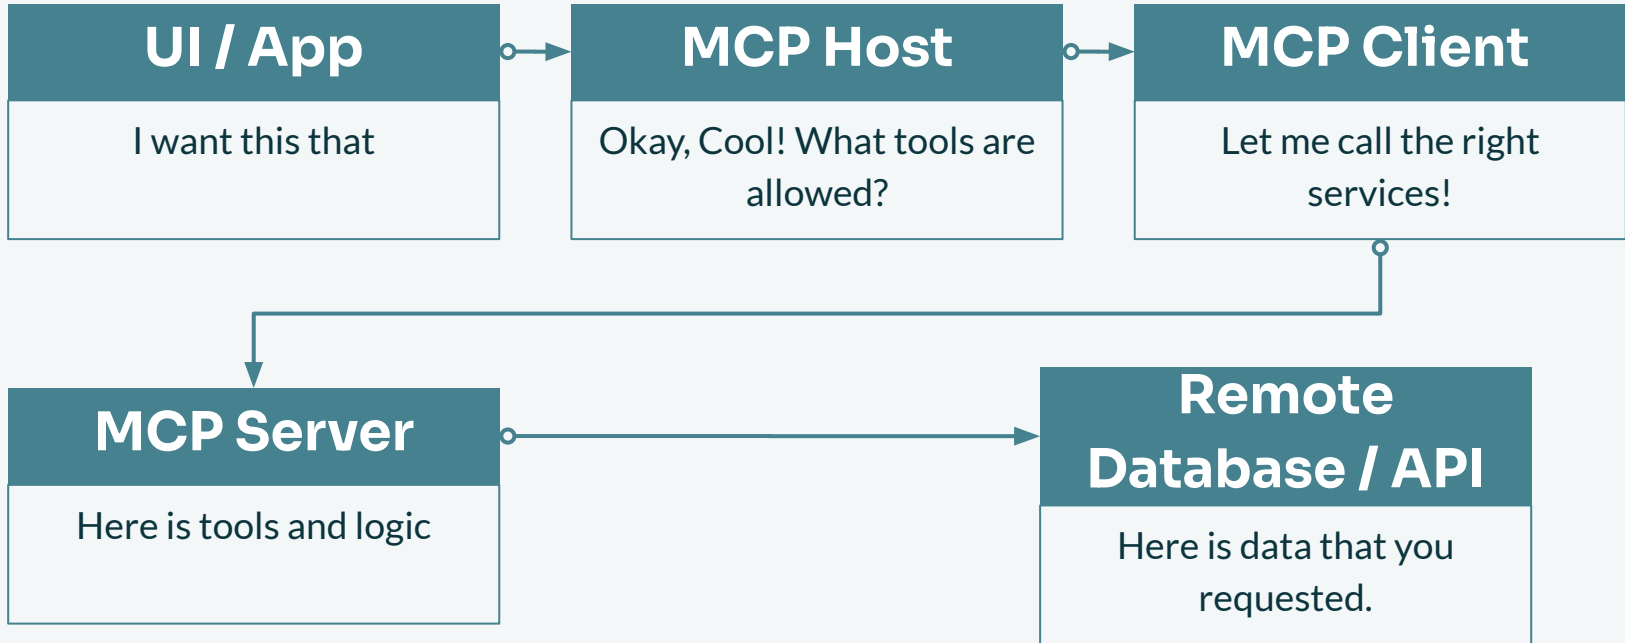

- One standard for all tools
- No manual integrations
- Cross-platform support
- Open-source & extensible

“MCP is like having both the API documentation and a universal translator combined, so every service speaks the same language to AI agents, making integration automatic instead of manual.”

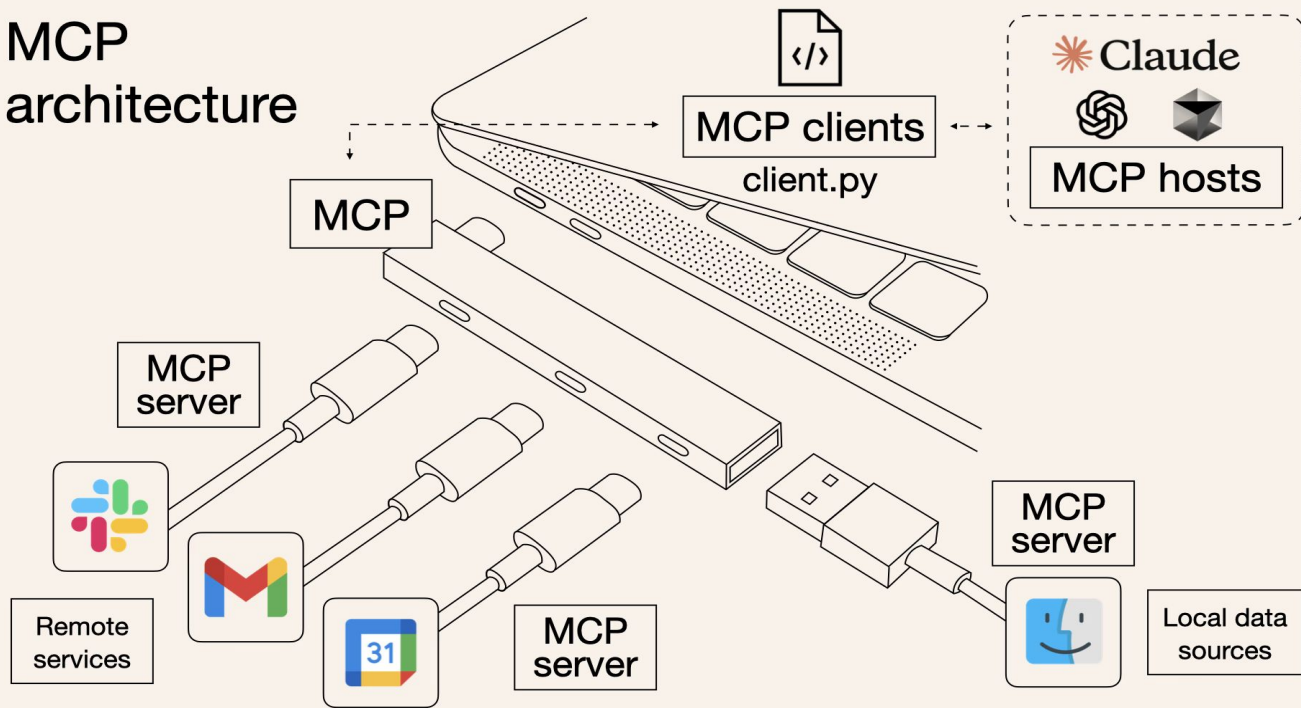

Host-Client-Server tool interaction model (via MCP)

Just like USB-C lets one cable work everywhere, MCP lets one AI work everywhere.

MCP
architecture

Main Theme of MCP

01

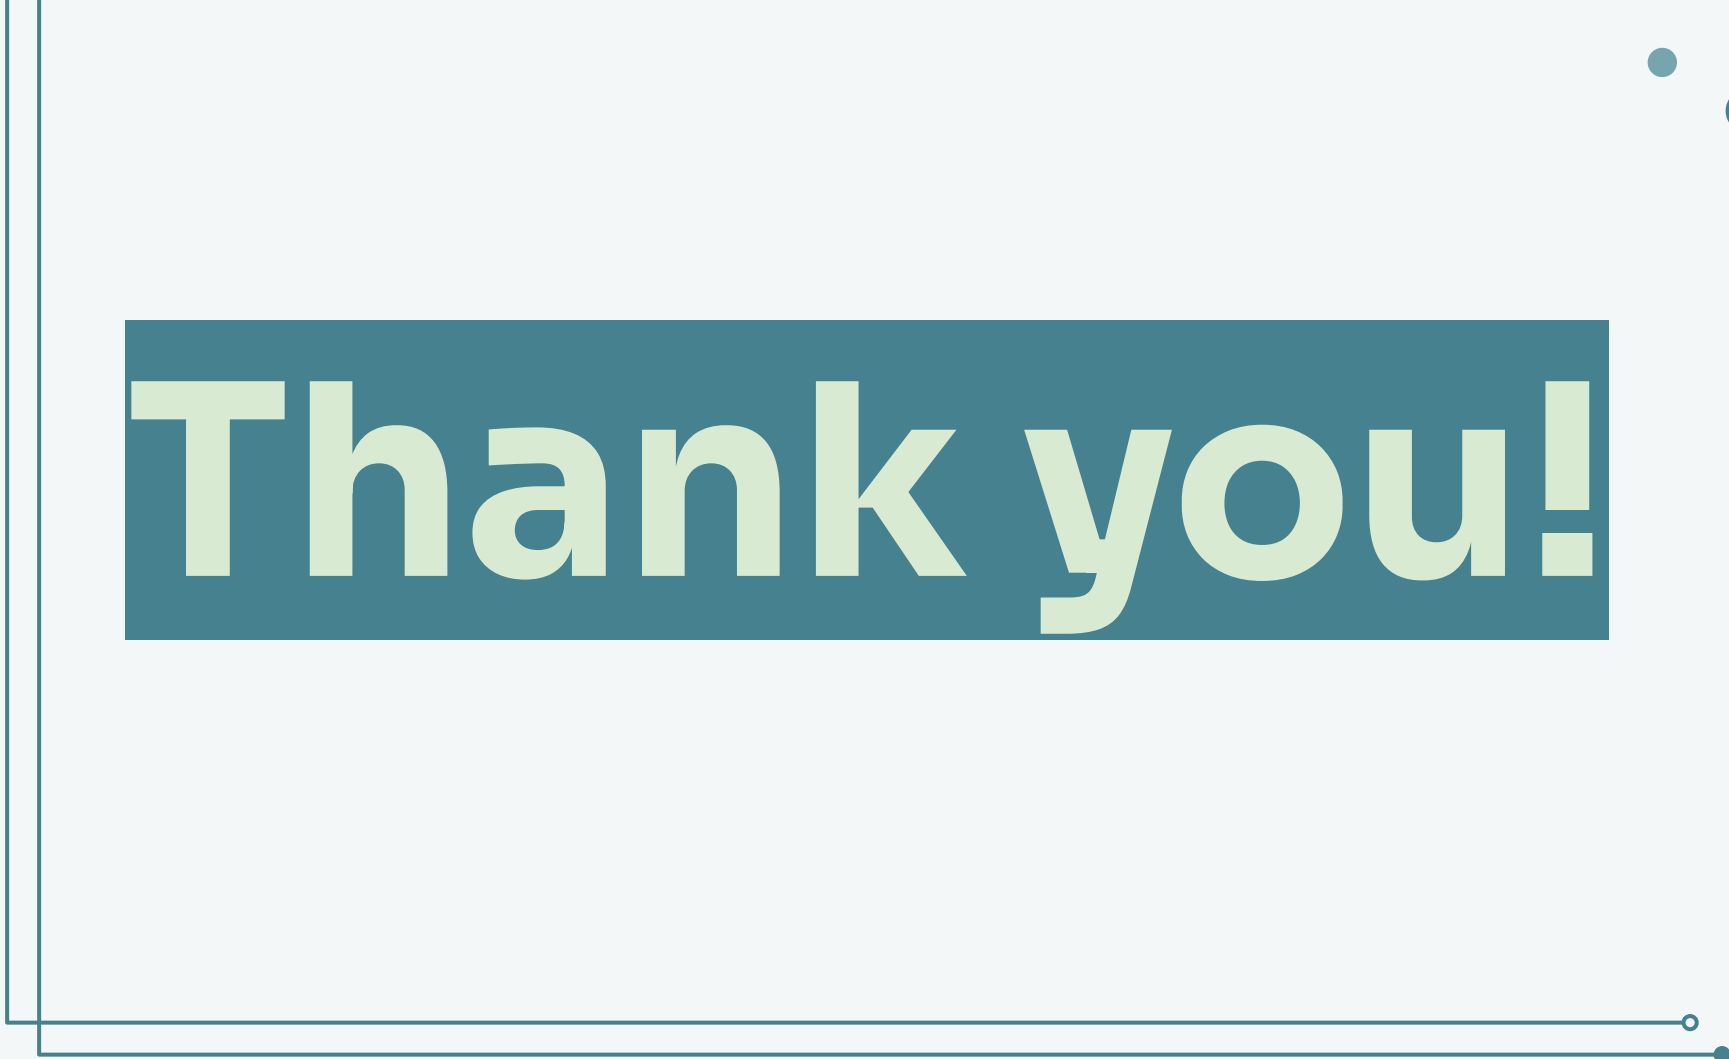

A Standard communication protocol for AI

02

Provides agents context they need to make the right API call

03

A guide for AI to choose right API and interact with third party platforms

Thank you!
